Lesson: Create a render

In this lesson, you will create a render.

Learning Objectives:

- Navigate to the Render Workspace.
- Set up a scene.
- Create a rendering.

## Step 1: Create a render of the Wooden Votive Holder model

|	
1. Carry on with the Wooden Votive Holder file from the previous example.	
2. Select Scene Setup from the Render workspace and use the left mouse button to drag the Photobooth environment onto the Canvas.	
3. Reduce the brightness value to 250 lux and close the Scene Settings control panel.	
4. Select Render from the Render workspace and render an 800x600 image using the Cloud Renderer on Final quality.	

5. The status of a render can be checked in the Render Gallery at the bottom of the screen. Left click on the thumbnail to open the Render Gallery image; close the image after viewing.
